

Senior Associate Scientist (Biomarker) - Thousand Oaks, CA

Position will be responsible for development and validation of assays to support analyses in clinical studies. This may include activities ranging from biomarker discovery using human tissues, to assay qualification and execution at GLP-like levels of compliance.

Basic Qualifications:

BS in biological sciences

3+ years experience in the biopharmaceutical or contract research industries specifically in biomarker assay development.

Experience with immunoassays, cytometry based assays, and or lab automation are required.

Preferred Qualifications:

Experience with the performance of these assays using clinical samples is considered desirable and experience with assay qualification/validation would be beneficial.
